

**All Points Broadband

Clarke Project Update**

September 8, 2025

Project Status

- ~3 miles Dominion middle mile constructed and ready
 - Will be spliced to APB last-mile at interconnection points
- First batch of VDOT land use permits approved within Fiber Service Area “CLRK-2” along eastern county border
 - Strong collaboration with Edinburg residency
 - APB to maintain sufficient bonding capacity
- All Points Broadband will release several miles to construction vendor in September
 - Broadband Power Solutions (BPS) is prime contractor for last-mile
 - Demonstrate adherence to QA/QC, traffic control, and restoration then scale up the number of work zones & crews
- APB will notify 333 locations within CLRK-2.1 & 2.2 to begin the preorder process in late September / early October
 - Create full account, select service level, provide method of payment
 - \$99 installation fee not charged until installation
- Service availability expected to begin in December in CLRK-2 and will proceed on a rolling basis as construction is completed; final activation expected in 2Q2026

Last-Mile Construction

- <https://allpointsbroadband.com/fiber-construction/>
- APB's 117.4-mile network will be 60% underground, 40% aerial
 - Weekly average of 0.5 miles underground or 1.5 miles aerial per crew
 - Crew count to be optimized to have sufficient backlog or permitted work and to maintain target completion date
- Expect lane closures or other minor inconveniences within work zones
- Residents should call 804-817-3055 instead of approaching construction crew
 - Unsafe to be in active work zone
 - Last-mile fiber construction performed by vendor, not APB employees
- APB will notify project locations of serviceability in their neighborhood via direct mail or email (if already preregistered for notifications)
 - Last-mile fiber construction crew will not be the crew connecting homes to the network; do not worry if crew leaves neighborhood before home is connected
 - Homeowners on private roads may need to provide utility easement to APB
- APB's next opportunity for reimbursement occurs when fiber becomes active

BEAD – Virginia Proposal Under Review

- VA DHCD conducted the federally-required Benefit of the Bargain application round for BEAD and has submitted its proposal to NTIA within 90 days
- Due to various factors determined by DHCD, funding for Clarke County locations was provisionally awarded to fiber optic broadband providers
- APB was provisionally awarded BEAD funding in portions of Clarke County; majority of provisional awards went to another fiber optic broadband provider

Thank You
